10 November 2014

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ □臣 = のへで

We have the following properties of the definite integral. They can all be derived from properies of the derivative and trivial observations.

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

$$\int_a^a f(x) \ dx = 0.$$

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

$$\int_{a}^{a} f(x) dx = 0.$$
  
2 
$$\int_{b}^{a} f(x) dx = -\int_{a}^{b} f(x) dx$$

1 
$$\int_{a}^{a} f(x) dx = 0.$$
  
2  $\int_{b}^{a} f(x) dx = -\int_{a}^{b} f(x) dx.$   
3  $\int_{a}^{b} c \cdot f(x) dx = c \cdot \int_{a}^{b} f(x) dx$ , where c is a constant.

1 
$$\int_{a}^{a} f(x) dx = 0.$$
  
2  $\int_{b}^{a} f(x) dx = -\int_{a}^{b} f(x) dx.$   
3  $\int_{a}^{b} c \cdot f(x) dx = c \cdot \int_{a}^{b} f(x) dx$ , where c is a constant.

#### Let f and g be integrable functions on [a, b].

Let 
$$f$$
 and  $g$  be integrable functions on  $[a, b]$ .  

$$\int_{a}^{b} \cdot f(x) \pm g(x) \ dx = \int_{a}^{b} f(x) \ dx \pm \int_{a}^{b} g(x) \ dx.$$

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 のへぐ

Let f and g be integrable functions on 
$$[a, b]$$
.  
4  $\int_{a}^{b} \cdot f(x) \pm g(x) \, dx = \int_{a}^{b} f(x) \, dx \pm \int_{a}^{b} g(x) \, dx$ .  
5  $\int_{a}^{c} \cdot f(x) \, dx = \int_{a}^{b} f(x) \, dx + \int_{b}^{c} f(x) \, dx$  where  $a \le b \le c$ .

◆□ → ◆□ → ◆三 → ◆三 → ◆○ ◆

◆□ → ◆□ → ◆三 → ◆三 → ◆○ ◆

When calculating definite integrals, substitution changes the limits of integration! To see this, let's use a simple example.

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 の�?

When calculating definite integrals, substitution changes the limits of integration! To see this, let's use a simple example. Calculate

$$\int_0^2 6x(x^2+1)^2 \, dx.$$

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 の�?

When calculating definite integrals, substitution changes the limits of integration! To see this, let's use a simple example. Calculate

$$\int_0^2 6x(x^2+1)^2 \, dx$$

Well, if we let  $x^2 + 1 = u$ , then we can see that an indefinite integral of  $6x(x^2 + 1)^2$  is simply  $(x^2 + 1)^3 = u^3$ . But notice:

When calculating definite integrals, substitution changes the limits of integration! To see this, let's use a simple example. Calculate

$$\int_0^2 6x(x^2+1)^2 \, dx$$

Well, if we let  $x^2 + 1 = u$ , then we can see that an indefinite integral of  $6x(x^2 + 1)^2$  is simply  $(x^2 + 1)^3 = u^3$ . But notice:

$$(x^{2}+1)^{3}\Big|_{0}^{2}=124\neq u^{3}\Big|_{0}^{2}=8.$$

Therefore, you have to **change** the limits of integration or **back-substitute**!

If you would like to change the limits of integration, you must make sure that u(x) is a monotonic function with respect to x, i.e. it must be strictly increasing or decreasing on the interval of integration in question.

If you would like to change the limits of integration, you must make sure that u(x) is a monotonic function with respect to x, i.e. it must be strictly increasing or decreasing on the interval of integration in question. Our function  $u(x) = x^2 + 1$  is strictly increasing on [0,1], so we're fine. Then you must calculate

$$\lim_{x\to b} u(x) = b' \& \lim_{x\to a} u(x) = a'.$$

If you would like to change the limits of integration, you must make sure that u(x) is a monotonic function with respect to x, i.e. it must be strictly increasing or decreasing on the interval of integration in question. Our function  $u(x) = x^2 + 1$  is strictly increasing on [0,1], so we're fine. Then you must calculate

$$\lim_{x\to b} u(x) = b' \& \lim_{x\to a} u(x) = a'.$$

Then you can simply calculate the new integral with the new upper and lower limits b' and a' respectively.

## The Method of Substitution for Definite Integrals

In our example, we need to calculate  $\lim_{x\to 2} [x^2+1] =$ 

In our example, we need to calculate  $\lim_{x\to 2} [x^2+1]=5$  and  $\lim_{x\to 0} [x^2+1]=1.$ 

In our example, we need to calculate  $\lim_{x\to 2} [x^2+1]=5$  and  $\lim_{x\to 0} [x^2+1]=1.$  The we can calculate

$$\int_{1}^{5} 3(u)^{2} du = u^{3} \bigg|_{1}^{5} = 125 - 1 = 124.$$

In our example, we need to calculate  $\lim_{x\to 2} [x^2+1]=5$  and  $\lim_{x\to 0} [x^2+1]=1.$  The we can calculate

$$\int_{1}^{5} 3(u)^{2} du = u^{3} \bigg|_{1}^{5} = 125 - 1 = 124.$$

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへぐ

And this is the correct integral!

$$\int_0^4 x\sqrt{9+x^2} \, dx.$$

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 の�?

$$\int_0^4 x\sqrt{9+x^2} \, dx.$$

Letting  $u = 9 + x^2$ , we see that

$$\int_0^4 x\sqrt{9+x^2} \, dx.$$

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへぐ

Letting  $u = 9 + x^2$ , we see that du = 2x, so we get that

$$\int_0^4 x\sqrt{9+x^2} \, dx.$$

Letting  $u = 9 + x^2$ , we see that du = 2x, so we get that

$$\int x\sqrt{9+x^2} \, dx = \int \frac{1}{2}\sqrt{u} \, du = \frac{1}{2}u^{\frac{3}{2}}\frac{2}{3} = \frac{1}{3}u^{\frac{3}{2}} = \frac{1}{3}(x^2+9)^{\frac{3}{2}}.$$

$$\int_0^4 x\sqrt{9+x^2} \, dx.$$

Letting  $u = 9 + x^2$ , we see that du = 2x, so we get that

$$\int x\sqrt{9+x^2} \, dx = \int \frac{1}{2}\sqrt{u} \, du = \frac{1}{2}u^{\frac{3}{2}}\frac{2}{3} = \frac{1}{3}u^{\frac{3}{2}} = \frac{1}{3}(x^2+9)^{\frac{3}{2}}.$$

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへぐ

So,

$$\int_0^4 x\sqrt{9+x^2} \, dx =$$

$$\int_0^4 x\sqrt{9+x^2} \, dx.$$

Letting  $u = 9 + x^2$ , we see that du = 2x, so we get that

$$\int x\sqrt{9+x^2} \, dx = \int \frac{1}{2}\sqrt{u} \, du = \frac{1}{2}u^{\frac{3}{2}}\frac{2}{3} = \frac{1}{3}u^{\frac{3}{2}} = \frac{1}{3}(x^2+9)^{\frac{3}{2}}.$$

So,

$$\int_0^4 x\sqrt{9+x^2} \, dx = \frac{1}{3}(x^2+9)^{\frac{3}{2}} \bigg|_0^4 = \frac{1}{3}(125) - \frac{1}{3}(27) = 32$$

◆□▶ ◆□▶ ◆ □▶ ◆ □▶ ○ □ ○ ○ ○ ○

Of course, we could have calculated

$$\int_0^4 x \sqrt{9 + x^2} \, dx = \int_9^{25} \frac{1}{2} \sqrt{u} \, dx.$$

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへで

Notice the changes in the limits of the integral!

Of course, we could have calculated

$$\int_0^4 x \sqrt{9 + x^2} \, dx = \int_9^{25} \frac{1}{2} \sqrt{u} \, dx.$$

Notice the changes in the limits of the integral! Then we would have gotten:

$$\frac{1}{3}u^{\frac{3}{2}}\Big|^2 5_9 = 32.$$

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

Remember (from grade school) that the average value of a set of numbers  $y_1, y_2, \ldots, y_n$  is just

$$\frac{y_1+y_2+\cdots+y_n}{r}.$$

п

・ロト・日本・モート モー うへぐ

Remember (from grade school) that the average value of a set of numbers  $y_1, y_2, \ldots, y_n$  is just

$$\frac{y_1+y_2+\cdots+y_n}{n}$$

Now, the average value of a function at n points can be written similarly as

$$\frac{f(x_1)+f(x_2)+\cdots+f(x_n)}{n}.$$

Remember (from grade school) that the average value of a set of numbers  $y_1, y_2, \ldots, y_n$  is just

$$\frac{y_1+y_2+\cdots+y_n}{n}$$

Now, the average value of a function at n points can be written similarly as

$$\frac{f(x_1)+f(x_2)+\cdots+f(x_n)}{r}$$

п

And we may use this to approximate the average value of a function on an interval [a, b] from which the  $x_i$ 's are taken.

Let's rewrite this last expression.

$$\frac{f(x_1)+f(x_2)+\cdots+f(x_n)}{n}=\frac{b-a}{b-a}\left[\frac{f(x_1)}{n}+\frac{f(x_2)}{n}+\cdots+\frac{f(x_n)}{n}\right]$$

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 のへぐ

Let's rewrite this last expression.

$$\frac{f(x_1)+f(x_2)+\cdots+f(x_n)}{n}=\frac{b-a}{b-a}\left[\frac{f(x_1)}{n}+\frac{f(x_2)}{n}+\cdots+\frac{f(x_n)}{n}\right]$$

And we can rewrite this as

$$\frac{1}{b-a}\left[\frac{b-a}{n}f(x_1)+\frac{b-a}{n}f(x_2)+\cdots+\frac{b-a}{n}f(x_n)\right]=$$

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 の�?

Let's rewrite this last expression.

$$\frac{f(x_1)+f(x_2)+\cdots+f(x_n)}{n}=\frac{b-a}{b-a}\left[\frac{f(x_1)}{n}+\frac{f(x_2)}{n}+\cdots+\frac{f(x_n)}{n}\right]$$

And we can rewrite this as

$$\frac{1}{b-a}\left[\frac{b-a}{n}f(x_1)+\frac{b-a}{n}f(x_2)+\cdots+\frac{b-a}{n}f(x_n)\right] =$$
$$\frac{1}{b-a}\left[f(x_1)\Delta x+f(x_2)\Delta x+\cdots+f(x_n)\Delta x.\right]$$

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 の�?

Let's rewrite this last expression.

$$\frac{f(x_1)+f(x_2)+\cdots+f(x_n)}{n}=\frac{b-a}{b-a}\left[\frac{f(x_1)}{n}+\frac{f(x_2)}{n}+\cdots+\frac{f(x_n)}{n}\right]$$

And we can rewrite this as

$$\frac{1}{b-a}\left[\frac{b-a}{n}f(x_1)+\frac{b-a}{n}f(x_2)+\cdots+\frac{b-a}{n}f(x_n)\right] =$$
$$\frac{1}{b-a}\left[f(x_1)\Delta x+f(x_2)\Delta x+\cdots+f(x_n)\Delta x.\right]$$

Passing through the limit, this function is simply

$$\frac{1}{b-a}\int_a^b f(x) \ dx$$

Because the approximation we derived earlier only improves as n grows, we have the following definition.

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 の�?

Because the approximation we derived earlier only improves as n grows, we have the following definition.

Definition (The Average Value of a Function)

If f is integrable on [a, b], then the average value of f on [a, b] is

$$\frac{1}{b-a}\int_a^b f(x) \ dx.$$

Because the approximation we derived earlier only improves as n grows, we have the following definition.

Definition (The Average Value of a Function)

If f is integrable on [a, b], then the average value of f on [a, b] is

$$\frac{1}{b-a}\int_a^b f(x) \ dx.$$

There is also a clear geometric interpretation of this!

If a function's integral over [a, b] is C, then the area under f is the same as the area under the line  $y = \frac{C}{b-a} =$ 

If a function's integral over [a, b] is C, then the area under f is the same as the area under the line  $y = \frac{C}{b-a} = \frac{1}{b-a} \int_{a}^{b} f(x) dx$ .

If a function's integral over [a, b] is C, then the area under f is the same as the area under the line  $y = \frac{C}{b-a} =$ 

If a function's integral over [a, b] is C, then the area under f is the same as the area under the line  $y = \frac{C}{b-a} = \frac{1}{b-a} \int_{a}^{b} f(x) dx$ .

If a function's integral over [a, b] is C, then the area under f is the same as the area under the line  $y = \frac{C}{b-a} =$ 

If a function's integral over [a, b] is C, then the area under f is the same as the area under the line  $y = \frac{C}{b-a} = \frac{1}{b-a} \int_{a}^{b} f(x) dx$ .

$$\frac{1}{4-0}\int_0^4 \sqrt{x} \ dx =$$

The amount of a certain drug in a patient's body t days after first taking it is given by  $C(t) = 5e^{-0.2t}$  units. Determine the average amount of the drug present during the first four days after first taking it.
