(ロ)、(型)、(E)、(E)、 E) の(の)

・ロト・日本・モト・モート ヨー うへで

A state election board is not using a random process for selecting the ordering of candidates on a ballot because the Republican nominee has been listed second for 15 of the last 16 election cycles.

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

- A state election board is not using a random process for selecting the ordering of candidates on a ballot because the Republican nominee has been listed second for 15 of the last 16 election cycles.
- The average weight of tennis balls manufactured by Wilson is less than 100 grams.

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

- A state election board is not using a random process for selecting the ordering of candidates on a ballot because the Republican nominee has been listed second for 15 of the last 16 election cycles.
- The average weight of tennis balls manufactured by Wilson is less than 100 grams.
- A paper claims that most American consumers know that the Kindle is a e-book reader.

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

- A state election board is not using a random process for selecting the ordering of candidates on a ballot because the Republican nominee has been listed second for 15 of the last 16 election cycles.
- The average weight of tennis balls manufactured by Wilson is less than 100 grams.
- A paper claims that most American consumers know that the Kindle is a e-book reader.
- A sample of 103 human body temperatures can be used to test whether or not the mean body temperature for humans is 98.6°F.

$\S8.2$ Basic Hypothesis Testing

Definition (Hypothesis)

A statistical **hypothesis** is a claim or statement about a property of a population.

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへぐ

Definition (Hypothesis)

A statistical **hypothesis** is a claim or statement about a property of a population. And a **hypothesis test** is a procedure for testing a claim about a property of a population.

Definition (Hypothesis)

A statistical **hypothesis** is a claim or statement about a property of a population. And a **hypothesis test** is a procedure for testing a claim about a property of a population.

Example

From the previous, testing that the average weight of tennis balls manufactured by Wilson is less that 100 grams would be equivalent to testing the statement

 $\mu < 100,$

where μ is the average weight of Wilson tennis balls.

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 のへぐ

If under the given assumption, the probability of a particular observed event is extremely small, we reject the assumption.

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへぐ

If under the given assumption, the probability of a particular observed event is extremely small, we reject the assumption.

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

First we must form a hypothesis. Use these general rules:

If under the given assumption, the probability of a particular observed event is extremely small, we reject the assumption.

First we must form a hypothesis. Use these general rules:

- The **null** hypothesis *H*⁰ should always be that a population parameter is equal to some value.
- The **alternative** hypothesis H_1 should either be that the same parameter is not equal to, less than, or greater than the value above.

The proportion of students at UAB who have taken a math class is at least 65%.

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 のへぐ

The proportion of students at UAB who have taken a math class is at least 65%.

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ □臣 = のへで

 H_0 is easy.

The proportion of students at UAB who have taken a math class is at least 65%.

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ □臣 = のへで

 H_0 is easy. H_0 : p = 0.65.

The proportion of students at UAB who have taken a math class is at least 65%.

 H_0 is easy. H_0 : p = 0.65. What should the other hypothesis be?

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 の�?

The proportion of students at UAB who have taken a math class is at least 65%.

 H_0 is easy. H_0 : p = 0.65. What should the other hypothesis be? Well, it can't be that $p \ge 0.65$ because that **includes** the null hypothesis.

The proportion of students at UAB who have taken a math class is at least 65%.

 H_0 is easy. H_0 : p = 0.65. What should the other hypothesis be? Well, it can't be that $p \ge 0.65$ because that **includes** the null hypothesis. The alternative hypothesis, then, is H_1 : p < 0.65,

The proportion of students at UAB who have taken a math class is at least 65%.

 H_0 is easy. $H_0: p = 0.65$. What should the other hypothesis be? Well, it can't be that $p \ge 0.65$ because that **includes** the null hypothesis. The alternative hypothesis, then, is $H_1: p < 0.65$, so failing to reject the null hypothesis is equivalent to supporting the claim whereas rejecting the null hypothesis is equivalent to not supporting the claim.

Two types of hypothesis tests will be used in this chapter.

Two types of hypothesis tests will be used in this chapter. Testing using a critical value.

Two types of hypothesis tests will be used in this chapter.

 Testing using a critical value. This method is similar to constructing a confidence interval, except we may have one sided intervals now.

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへぐ

Two types of hypothesis tests will be used in this chapter.

- Testing using a critical value. This method is similar to constructing a confidence interval, except we may have one sided intervals now.
- Testing using a *P*-value, which describes the area lying beyond a test statistic in a one- or two-sided manner.

Definition (Test Statistic)

A **test statistic** is the result of converting a sample statistic into a value used to test the null hypothesis. They are the "standardized" statistic because they generally take the form

estimate - hypothesized value

standard error

Definition (Test Statistic)

A **test statistic** is the result of converting a sample statistic into a value used to test the null hypothesis. They are the "standardized" statistic because they generally take the form

estimate - hypothesized value

standard error

Proportion <i>p</i>	Mean μ with σ	Mean μ w/o σ	Std. Dev. σ
$z = rac{\hat{p} - p}{\sqrt{rac{pq}{n}}}$	$z = \frac{\bar{x} - \mu}{\frac{\sigma}{\sqrt{n}}}$	$t=rac{ar{x}-\mu}{rac{s}{\sqrt{n}}}$	$\chi^2 = \frac{(n-1)s^2}{\sigma^2}$

Definition (Test Statistic)

A **test statistic** is the result of converting a sample statistic into a value used to test the null hypothesis. They are the "standardized" statistic because they generally take the form

estimate - hypothesized value

standard error

The significance of a *P*-test is called α . We reject the null hypothesis if $p \leq \alpha$ and fail to reject it if $p > \alpha$.

Let ω be a test statistic. We calculate the P-value using the following rules:

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 のへぐ

Let ω be a test statistic. We calculate the P-value using the following rules:

If the alternative hypothesis is a left-tailed ("less than") statement, then the *P*-value is the area to the left of the statistic ω using the appropriate distribution.

Let ω be a test statistic. We calculate the P-value using the following rules:

- If the alternative hypothesis is a left-tailed ("less than") statement, then the *P*-value is the area to the left of the statistic ω using the appropriate distribution.
- If the alternative hypothesis is a right-tailed ("greater than") statement, then the *P*-value is the area to the right of the statistic ω using the appropriate distribution.

Let ω be a test statistic. We calculate the *P*-value using the following rules:

- If the alternative hypothesis is a left-tailed ("less than") statement, then the *P*-value is the area to the left of the statistic ω using the appropriate distribution.
- If the alternative hypothesis is a right-tailed ("greater than") statement, then the *P*-value is the area to the right of the statistic ω using the appropriate distribution.
- If the alternative hypothesis is a two-tailed ("not equal to") statement, then the *P*-value is the area outside of the interval $(-\omega, \omega)$ (if ω is positive) or $(\omega, -\omega)$ (if ω is negative). In the case of a χ^2 test, we look at the small tail and double the area in that tail for the *P*-value.

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへぐ

Definition (Type I Error)

This is the error of rejecting a true null hypothesis.

Definition (Type I Error)

This is the error of rejecting a true null hypothesis.

This would be like concluding that the proportion was not equal to 50% but was more than 50% when in reality the proportion was exactly 50%.

Definition (Type I Error)

This is the error of rejecting a true null hypothesis.

This would be like concluding that the proportion was not equal to 50% but was more than 50% when in reality the proportion was exactly 50%.

Definition (Type II Error)

This is the error of failing to reject a false null hypothesis.

Definition (Type I Error)

This is the error of rejecting a true null hypothesis.

This would be like concluding that the proportion was not equal to 50% but was more than 50% when in reality the proportion was exactly 50%.

Definition (Type II Error)

This is the error of failing to reject a false null hypothesis.

This would be like concluding that a population proportion was 50% when it actually was not.
We use α to denote the probability of making a Type I Error, i.e. it is the probability of rejecting a true null hypothesis.

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

We use α to denote the probability of making a Type I Error, i.e. it is the probability of rejecting a true null hypothesis.

We use β to denote the probability of making a Type II Error, i.e. it is the probability of failing to reject a false null hypothesis.

We use α to denote the probability of making a Type I Error, i.e. it is the probability of rejecting a true null hypothesis.

We use β to denote the probability of making a Type II Error, i.e. it is the probability of failing to reject a false null hypothesis.

The confidence of a test is $1-\alpha$ (the probability of failing to reject a true null hypothesis), and the power of a test is $1-\beta$ (the probability of rejecting a false null hypothesis).

(日) (同) (三) (三) (三) (○) (○)

 $H_0: p = 0.95$ and

 $H_0: p = 0.95$ and $H_1: p < 0.95$.

$$H_0: p = 0.95$$
 and $H_1: p < 0.95$.

The test statistic is
$$z = \frac{\hat{p} - p}{\sqrt{\frac{pq}{n}}} = \frac{0.92996 - 0.95}{\sqrt{\frac{(0.95)(0.05)}{514}}} \approx -2.085.$$

 and $H_1: p < 0.95$.

The test statistic is $z = \frac{\hat{p}-p}{\sqrt{\frac{pq}{n}}} = \frac{0.92996-0.95}{\sqrt{\frac{(0.95)(0.05)}{514}}} \approx -2.085$. So we test to see if

$$P(Z < -2.085)) \le 0.1.$$

And because P(Z < -2.085) = 0.0186, we get that we must reject the null hypothesis.

$$H_0: p = 0.95$$
 and $H_1: p < 0.95$.

The test statistic is
$$z = \frac{\hat{p}-p}{\sqrt{\frac{pq}{n}}} = \frac{0.92996-0.95}{\sqrt{\frac{(0.95)(0.05)}{514}}} \approx -2.085$$
. So we test to see if

$$P(Z < -2.085)) \le 0.1.$$

And because P(Z < -2.085) = 0.0186, we get that we must reject the null hypothesis. In this case, this means that the data does **not** support our original claim!

You can use StatCrunch to construct a hypothesis test for proportions! You **must** calculate the number of successes, though!

You can use StatCrunch to construct a hypothesis test for proportions! You **must** calculate the number of successes, though!
